ONLINE:

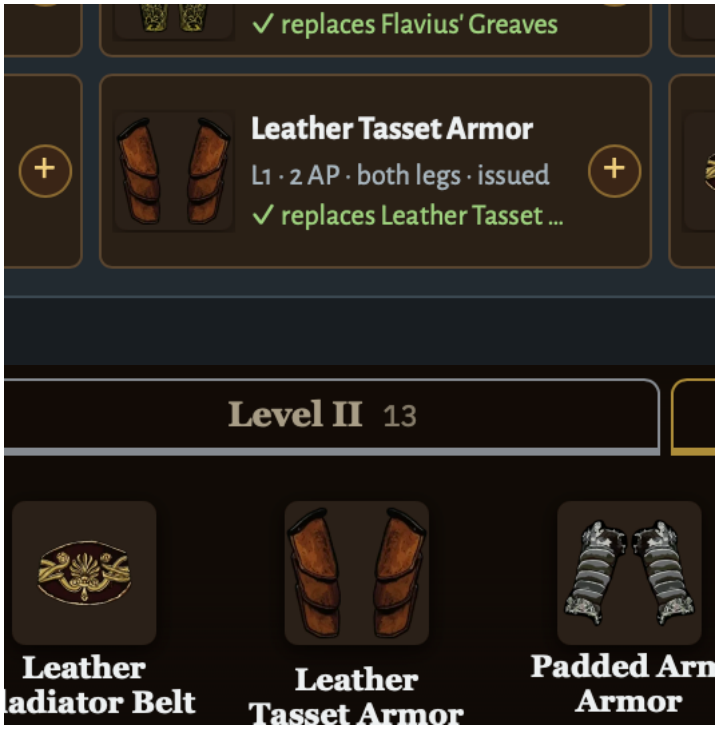

-season tab, the banner is not formatted properly, text not aligned, font colors making it hard to read. should have more space to fit this information properly.
-not sure changing classes should be allowed, it doesnt really provide any benefit considering the characters earn abilities through their stats. Which begs the question, how do we do online character stat progression? do we need some functionality like the training yard to improve them? we would need online matches to provide XP(CF?) for the gladiator that the manager applies? this would

-should we have ability to release one of our gladiators? have them quit the team, leave all equipment, to make room for a new character? if so we need to confirm with the user before (deletion in the same way a character would be killed online).
-the XP/match results screen should also be displayed to the users once an event concludes and they reach the online main menu. we should see the xp/cf value get tallied and added to to a larger xp bar to provide fun visual feedback for their character. When levels of xp are reached, maybe that is when the stat upgrade can be applied? lets look at other games that do this progression well and try to mimic it respectfully.

-the button to 'leave the online arena' should be the same as the other new button looks(like main menu, sandstone, etc.)

MANAGER MODE:
-infirmary, when we put injured gladiators into a bed and need to treat a severed limb, if we purchase a regrow lost limb, we should only be allowed 1 limb per week and it should not heal them or give them back the limb until that week they got it put back on, completes. the following week, they should have to deal with a chunk of fatigue per limb, say ~20% for each? (from the operation of course).
-we should try and avoid a 5 bout match week. I think i see this due to the schedule already including a special event within it, while also generating a special invitational event that happens to fall on the same day. We should make sure those invite events don't overlap with a 4 event match week.
-whenever i go back to My Ludus, it should always show the default main view of that page, not leave open and popups or the letters window.
-looking at the league>schedule, i should not be able to bill a fighter for special invites, only through the invite itself or invitationals list. thoughts?
-it is kind of strange to see my team 2nd in the league with a record of 2-11. Should losses lower the teams score/pts? maybe we should give 3 pts to 1st, 2 to 2nd, 1 to 3rd, 0 or -1 to 4th?.
I also think the records are misleading. 2-11 for most would mean 2 wins 11 losses. but in these events, we would need to account for podium finishes(1st 2nd 3rd and none can have been killed; must survive to get the points).
-when recruiting, why would i not just go straight to "trial bout' to fully scout the recruit and then sign? i think it may need to have higher cost and week to week recruiting using lower hour strategies should be effectively cheaper but take longer. we need incentive for a user to choose or the other. I kept seeing the advisor push me to scout a mid-cost strategy and it taking me 2-3 weeks to be able to offer. I think those suggestions should be better based on their perceived value, rating, cost, and any other factors we could use to help the advisor make better suggestions to the player. The suggestions maybe only appear once the advisor becomes higher level, level 3 and up? not sure, just want to improve/tweak this to improve overall cycle/feel/gameplay loop. Right now i see the main reason for using lower hour scouting strats is when i dont have enough left to do the trial bout.
-infirmary, i think resting a player for the week

-infirmary, does a care routine cost the manager anything? why wouldnt they just enable it for each gladiator if no cost and only a benefit?
-infirmary, hire a medicus(in banner) and Hygeias blessing button should both be moved above the list of gladiators on the left of the page. Integrate them into the layout appropriately.
-how does a team event split the purse if they are a mix bag of free agents or other teams? i think it should be a percentage based on CF earned.
-My Ludus>The Council; I now see the keywords, “Council”, “Counsel”, “Consilium”, “The Consilum’s Counsel”. This is way too much of the same/different words being used all at once, very confusing. I dislike the portrait for consilium guy is above the others, if anything, should move his face down to the bottom left to be the main icon(instead of the building), and we can spread out more of their actions on that tool bar. The consilium popup has a lot of information now, we should pull the buildings section, we already have it as a main tile in my ludus. Most of(if not all) of the conslium counsel actions/buttons could be compiled into a report we see in the weekly tasks or as a letter, there are other weekly reports, im sure we can find a way to incorporate it that way instead through their popup. If you understand this change, help me implement it.
-really not sure how my team actually acquires armor and weapons. I think i am seeing new recruits bringing their own equipment and it ends up on our shelves once they are killed or injured. we need to improve/refine the gameplay loop for armor/weapons and try to bring it into lock step with online with how a user needs to manage the equipment of their team.
-recruiting tab, it would be nice not to have to scroll left or right in the list. its ok if i need to scroll down, but lets try and fit most of it comfortably.
-recruiting, when i click compare, it should use their portrait and recruiting card/ratings/ personality cards and any of the other pertinent new visuals someone would want to see in comparing 2 gladiators.
-infirmary, if we are going to show a “build valetudinarium card” there, it should only be enabled to be clicked if they treasury has enough to purchase the upgrade, like anything else.
-the letter for week in review, the (x) is ugly and i don’t like it or where its placed. Im sure you can come up with a better way to implement that dismiss function for any mail received.
-received a letter about league standings and it was read but still showed as a value on the email button due to me not filing it away.
-leather tasset armor still show as facing wrong way.

-match week, naumachia event. I shouldn't even be able to select anyone from my team to enter in an event that has entry fee if i cannot afford it. if i earn coin later in the week, it should be unlocked for me to enter them.
-when looking at the enter event screen(where we choose from our team to enter into an event), i see a column for their fatigue, but we should also show if any of them are resting or in a bed.
-i was unable to take a seat in the naumachia event once i earned some coin from the previous bouts. it said i could not bump a rival house seat, only a free agent. The event showed 2 free agents…i should be able to take any of those 2's seats if i have the coin to enter.

PLAY NOW:
-ⓘ How the Blessings bag works, remove that info, not sure that holds up anymore anyways.

-Play now options should allow Drafts for any event(some already do drafts and each that does should inform the user in the event details). If draft is selected for ex. Classic Democritus, we just need to ensure the event only gives out what is drafted or what the event draft says they should start with. Do we need to go over the draft rules again? i can upload a pdf.
-clicking the challenges tab in play now shows me the arena in the background of the popup. Clicking X or back to Main Menu from the challenge pop up takes be back to the main menu.
-the challenges popup could be more compact, it should only be as large as it needs to be to display the challenge options.

3D Models:
-For the pose, need ability to adjust the weapons(or shield) they hold.
-the scale of the character tokens themselves should not adjust based on their held weapon or armors, etc. scale should remain all game, what are we currently doing in regards to scaling the tokens mid game? I would like to see them a little over half as tall as a pillar, when they are seen in the arena.

CREATOR STUDIO:
-Custom class; clicking the armor option "padded wraps" causes the screen to flicker(can see other tab options for a second). This also occurs when i change any other option, saving, etc. as well, the flicker happens.
-custom character; updating an option causes the nav values to flicker(ex. Classes 3; the 3 flickers)
-custom class>the ability modal should say, "Extra". We also don't need ability to name any abilities(the text box).
-class designer look and feel should match the character designer and other updated designers(larger tabs, font, validator, etc). Beasts, Cohorts, Tokens, Tournament, Invitationals, Editors, Spectators tabs also need this update.
-creator studio>names>if i click a name and click to use it, when it takes me to the character designer, it should show me the basic tab so i can see the name immediately.

-character designer; remove “Start a Fresh one” from the bottom right, we already have +New Character in upper right and it moves it away from someone accidentally clicking start fresh when they are trying to save.
-Exit Creator Studio button could use the sandstone treatment

GENERAL:
-manager mode>manage saves; this window needs an update to match other menus/buttons/visuals.
-main menu>saves; this window needs an update to match other menus/buttons/visuals.

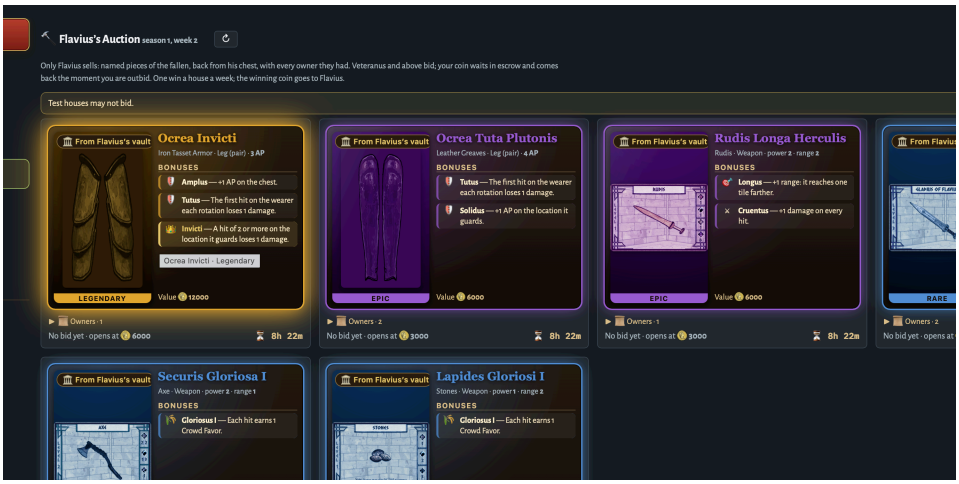

- i tried a play now event and in the middle of the cpu turn i refreshed the page. it took me back to the main menu. i was hoping we could bring the user back to their event, be it play now, hot seat, or online. We should try to ensure they pick right back up where they left off in case of interruption.

-feel like we need a unified (x) button that uses the sandstone look like other buttons.

-coin should also fly towards the coin tall the same why cf hops over. trophies can do the same. When someone eliminates a beast, they should see coin, cf, and a trophy all do the animation/visual of adding to the total.

-the toggle for show token bases should also occur for beast tokens. Instead of making them float above an invisible base, lets also move the model down to the tile floor when this is toggled off(so it looks like they touch the ground properly)

-online>armors still look off, maybe scale them down to fit the box so they are not scrunched.

Error log from in the UI, some older than others:
